

Tara Uni

A university mobile application designed to make student transportation more convenient through carpooling, navigation, and smart recommendations.

Login and Sign Up Process

- 01

User Registration: Users enter their required details to create a new account.
- 02

Authentication: Spring Boot handles user authentication and validates the submitted credentials.
- 03

Database Storage: User account information is securely stored and managed in a PostgreSQL database.
- 04

Account Access: Once registered and authenticated, users can securely log in and access the application.

Application Service

Find Carpools

Allows students to browse available carpools and find suitable rides based on their needs.

Create a Carpool Party

Enables users to create and share their own carpool trips with other students.

Transportation AI

Uses AI to provide smarter transportation recommendations based on routes, destinations, and travel needs. AI helps improve route suggestions and make transportation planning more convenient for students.

Create a Carpool Party Flow

Origin and Destination

See Location Details

Enter Passenger Amount

Enter Price per Person

Enter Date and Time

Success!

Find Carpools Screen

Allows students to view available carpool trips, check important details such as destinations, schedules, and available seats, and choose a suitable ride based on their transportation needs.

Transportation AI

Uses AI to analyse the user's destination and travel needs to provide smart transportation and route recommendations, helping students plan their journeys more efficiently.

Tech Stack

Frontend: React Native, Expo, JavaScript/TypeScript

Backend: Java, Spring Boot, and REST APIs

Database: PostgreSQL

Maps & Location: Google Maps and Google Places API

Gemini: AI-powered transportation recommendations
